STAY TUNED!!

Innovating the rehabilitation care system

[READ MORE](#)

ABOUT THE PROJECT:

Rehabilitation is care that helps people get back or improve abilities necessary for their daily life. The challenge is that such care often lies with the family without much systemic or technological support. The RehAllianCE project helps MedTech companies break through and accelerate the commercialisation of their products.

The project partners share experiences and good practices to develop a set of policy recommendations to improve the health care sector's innovation governance. They will test new technologies, such as rehabilitation robots or exoskeletons, assistive devices, wearables or telemetric tools.
